

Onshore Technologies, Inc. Policy Statement REACH SVHC-223 (Registration, Evaluation, Authorization and Restriction of Chemicals)

REACH is a European Union Regulation of 18 December 2006. REACH addresses the production and use of chemical substances and their potential impacts on both human health and the environment. One of the major elements of the REACH regulation is the requirement to communicate information on chemicals up and down the supply chain. This ensures that manufacturers, importers and also their customers are aware of information relating to health and safety of the products supplied.

Companies placing articles on the market in the European Economic Area¹ (EEA) may also have to fulfill certain requirements for articles that contain substances of very high concern (SVHC's). This is irrespective of whether they produce these articles themselves or they purchase them (inside or outside of the EEA). The official candidates list of SVHC'S can be found at <http://echa.europa.eu/candidate-list-table>.

To date, the maximum obligation placed upon Onshore Technologies is per REACH Article 33 - Communication in the Supply Chain. Article 33 requires that a manufacturer and/or a supplier of articles has an obligation to provide information to customers upon request if a product contains an SVHC in a concentration greater than 0.1% by weight, of the candidate list (currently 223 substances)

Onshore Technologies, Inc. is committed to executing due diligence in the identification, documentation, and communication to customers of its products that contain an SVHC in a concentration greater than 0.1% by weight, of the candidate list (currently 223 substances)

Onshore considers itself to be exempt based on our knowledge of material used to manufacture our products and our understanding of REACH as given in guidance document, all SVHC lists published prior to January 17, 2022.
